

AARAV MEHTA

Data Scientist

Bengaluru, India | +91 90000 12345 | aarav.mehta.ds@example.com | linkedin.com/in/aarav-mehta-ds

PROFESSIONAL SUMMARY

Data Scientist with 6 years of experience applying statistical analysis, predictive modeling, and machine learning to product, customer, and operational data. Skilled in Python, SQL, Tableau, Excel, experiment design, data mining, feature engineering, model evaluation, and communicating analytical findings to technical and business stakeholders. Experienced in working with product and engineering teams to turn structured and semi-structured data into production-ready insights and decision-support solutions.

CORE SKILLS

Programming & Data: Python, SQL, Pandas, NumPy, Scikit-learn, Jupyter, Git

Statistics & Modeling: Statistical analysis, hypothesis testing, regression, classification, clustering, predictive modeling, pattern recognition, feature engineering, model validation, error analysis

Analytics & Visualization: Data mining, exploratory data analysis, data cleaning, trend analysis, Tableau, Excel, PowerPoint, Matplotlib

Data & ML Workflow: Structured and semi-structured data, ETL collaboration, model deployment support, REST API integration, data quality validation, A/B testing

Collaboration: Stakeholder communication, product analytics, cross-functional collaboration, concurrent project delivery

PROFESSIONAL EXPERIENCE

Senior Data Scientist | Nexa Analytics Solutions | Bengaluru, India | Jan 2024 - Present

- Partner with product managers, designers, and engineers to translate business questions into analytical problems and define data requirements for new product capabilities.
- Develop predictive models for churn, conversion propensity, and demand forecasting using Python, SQL, Scikit-learn, regression, tree-based models, and ensemble methods.
- Design analytical experiments and A/B test analyses; identify and combine internal and third-party datasets, then profile, clean, and validate variables before modeling.
- Perform model error analysis, feature evaluation, and validation to improve predictive performance; create Tableau dashboards and PowerPoint summaries for stakeholders.
- Work with software and machine-learning engineers to package scoring logic and support deployment of analytical models into internal applications and batch workflows.

Data Scientist | Orbit Retail Technologies | Hyderabad, India | Jul 2021 - Dec 2023

- Analyzed large customer, transaction, and product datasets using Python and SQL to identify behavioral patterns, sales trends, and retention opportunities.
- Built classification and regression models for campaign response, customer value, and inventory planning; evaluated precision, recall, ROC-AUC, RMSE, and business impact.
- Applied clustering and segmentation, cleaned and validated relational and CSV datasets, and collaborated with data engineers to improve reusable analytics datasets.
- Presented findings through Tableau dashboards, Excel analysis, and stakeholder presentations, translating technical results into business recommendations.

Data Analyst | InsightEdge Consulting | Pune, India | Sep 2020 - Jun 2021

- Used SQL, Excel, Python, and descriptive statistics to analyze client sales and operations data; built basic forecasting and regression analyses for planning decisions.
- Prepared PowerPoint presentations and data visualizations for client reviews and documented data quality issues for technical teams.

SELECTED PROJECTS

Customer Churn Prediction and Retention Analytics

- Built a Python churn model using customer profile, usage, and service variables; compared classifiers, reviewed feature importance and error patterns, and translated results into retention actions.

Product Demand Forecasting

- Developed demand forecasts from historical transaction data, validated prediction errors across product groups, and delivered results through Tableau dashboards for planning teams.

EDUCATION

Bachelor of Technology in Computer Science and Engineering | Visvesvaraya Technological University | 2020
