

ARJUN MEHTA

Machine Learning Engineer | Bengaluru, India | arjun.mehta@example.com | +91 98765 43210 | linkedin.com/in/arjunmehta-ml

PROFESSIONAL SUMMARY

Machine Learning Engineer with 4 years of experience building and deploying supervised learning and deep learning solutions for product teams. Hands-on with Python, SQL, scikit-learn, TensorFlow, model APIs, Docker, AWS, and ML monitoring. Experienced in converting product requirements into reliable ML services, improving model performance, and collaborating with software engineers. Seeking to transition into a broader Data Scientist role with greater exposure to statistical analysis, business analytics, and stakeholder-facing insight generation.

CORE SKILLS

Programming: Python, SQL | **Machine Learning:** scikit-learn, TensorFlow, XGBoost, classification, regression, feature engineering | **ML Engineering:** FastAPI, Docker, Git, CI/CD, AWS, model monitoring | **Data:** pandas, NumPy, data preprocessing, validation, basic exploratory analysis | **Tools:** Jupyter Notebook, VS Code, Excel (working knowledge)

PROFESSIONAL EXPERIENCE

Machine Learning Engineer - NovaTech Solutions, Bengaluru

July 2023 - Present

- Built and deployed classification models in Python to support customer-risk and recommendation workflows, improving model inference reliability in production.
- Collaborated with backend engineers and product managers to convert business requirements into ML features and API-based prediction services.
- Performed feature engineering, train-validation splits, model comparison, and error analysis using scikit-learn and XGBoost.
- Created FastAPI services, containerized models with Docker, and supported deployment to AWS environments.
- Monitored model performance and data-quality checks, investigating prediction drift and failed pipeline runs.
- Used SQL and pandas to prepare model-training datasets from internal transactional tables.

Associate Machine Learning Engineer - Infera Labs, Hyderabad

June 2021 - June 2023

- Supported development of regression and classification models for operational forecasting and internal automation use cases.
- Cleaned training data, handled missing values and outliers, and created reusable preprocessing pipelines in Python.
- Assisted senior engineers with hyperparameter tuning, model evaluation, and deployment testing.
- Wrote SQL queries to extract structured datasets for model development and validation.
- Prepared technical notes and shared model-performance updates with engineering and product team members.

SELECTED PROJECTS

Customer Churn Prediction Service: Built a Python classification pipeline using scikit-learn, evaluated precision/recall and ROC-AUC, exposed predictions through FastAPI, and packaged the service with Docker.

Image Defect Classification Prototype: Developed a TensorFlow CNN prototype for classifying manufacturing defects and collaborated with software engineers on inference integration.

EDUCATION

B.Tech in Computer Science and Engineering - Visvesvaraya Technological University, 2021

ADDITIONAL INFORMATION

Strong interest in applied machine learning, production ML systems, and model reliability. Comfortable working in cross-functional engineering environments with multiple concurrent development tasks.
